Professional Experience

June 2022 – Present

Hyderabad

Lead Front End Engineer at Milestone technologies

Project - 1:

Name : Merchant Portal

Development Type : UI and Microservices

Description : It shows Paysafe merchant's accounts, transactions, Digital Invoice details, and Reports information. Merchants log in to this portal to verify all the details.

Responsibilities:

1. Responsible for developing UI features with Angular and writing REST APIs.
2. Taking responsibility for completing assigned tasks and helping the team members with their concerns.
3. Always focused on unblocking inter-team members in case of their issues.
4. Setting required configurations in CI/CD, fixing the issues, and sending them to UAT on time.
5. Providing support in case of issues on prod.

Awards

Received performance award for solving issues and new use cases for clients.

Received performance award for single handedly delivering priority features on time.

Certifications:

Completed AWS cloud practitioner certification with a very good score of 970/1000.

April 2017 - Jun 2022

Hyderabad

Platform Engineer II at Paysafe

Project - 2:

Name : Customer Service center

Development Type : UI and Microservices

Description : It is a back-office application for internal users of Paysafe to provide accounts, transactions, Digital Invoice details, and Report information to merchants.

Responsibilities:

- Responsible for developing UI features with Angular and writing REST APIs.
- Taking responsibility for completing assigned tasks and helping the team members with their concerns.
- Always focused on unblocking inter-team members in case of their issues.

Platform Engineer at Paysafe

Project - 3:

Name : Customer-Facing Portals

Development Type : UI and Microservices

Description: Paysafe has several customer-facing portals like a business portal, Skrill, and Neteller. I have worked on priority on all those portals and delivered them on time.

Responsibilities:

- Responsible for developing UI features with Angular and writing REST APIs.
- Taking responsibility for completing assigned tasks.

Senior Software Development Engineer in Test at Paysafe

Project - 4:

Name : Group Communication Service

Development Type : Microservices and Automation

Description : GCS deals with providing all types of communication services including SMS, Mobile Push (IOS & Android), Voice, Email, Webhooks, and In-App notifications. Primarily started testing web services and soon into the writing of REST APIs development. Handled both automation and development together and delivered in time.

Responsibilities:

1. Provided support and fixed prod issues.
2. Responsible for functional and automation testing.
3. Extensively worked with Postman, RestAssured, and Apache HTTPClient.

Software Development Engineer in Test at ZenQ

Project - 5:

Ancestry: Ancestry is a privately held largest genealogy company in the world. It operates a network of genealogical and historical record websites. Ancestry's brands include Ancestry, AncestryDNA, AncestryHealth, and Family Tree Maker.

Responsibilities:

1. Preparation of functional, mobile, and automated test plans with test cases to cover all various scenarios.
2. Creating and enhancing automation test cases using Selenium and Java.
3. Manual and Automated testing of API Test cases using Apache HTTP Client and RestAssured.
